Profile

Computer Engineering student with strong interests in Artificial Intelligence, Computer Vision and Software Development. Experienced in developing AI-powered assistive systems, chatbots, web applications and game development projects using modern programming tools and frameworks.

Education

Lokmanya Tilak College of Engineering Navi Mumbai, India
Bachelor of Engineering in Computer Engineering
CGPA: 7.25 / 10 Expected: 2027

Technical Skills

Programming: Python, PHP, JavaScript, C++
AI & Computer Vision: OpenCV, MediaPipe, Machine Learning Fundamentals, Gesture Recognition
Web Development: HTML, CSS, MySQL
Tools: Git, GitHub, VS Code, Pygame

Technical Experience

Student Software Developer 2023 – Present
Self Projects / Academic Development

- Developed multiple software applications involving AI, computer vision and web technologies.
- Implemented gesture recognition systems, chatbots and full-stack web applications using Python, PHP and JavaScript.
- Focused on building practical solutions addressing accessibility and real-world problem scenarios.

Projects

Easy Vision – Assistive Communication System

Computer Vision, Machine Learning

- Developed an AI-based assistive communication system that converts hand gestures into text and speech for visually and speech impaired users.
- Implemented real-time gesture detection and hand tracking using OpenCV and MediaPipe to recognize predefined gestures accurately.
- Integrated text-to-speech functionality to convert recognized gestures into audio output, enabling effective communication.

Flight Booking Management System

Web Development

- Developed a web-based airline reservation system enabling users to search flights, manage bookings, and store customer information.
- Implemented backend functionality using PHP and MySQL for handling user authentication, booking records, and database management.
- Built a relational database structure to efficiently manage flight schedules, passenger data, and booking transactions.

Dine Deal Dash – Food Waste Reduction Platform

- Developed a web platform connecting restaurants with nearby users to distribute surplus food at discounted prices, reducing food wastage and improving accessibility.
- Implemented user authentication, restaurant listings, and real-time food availability using PHP, MySQL, HTML, CSS, and JavaScript.
- Created an intuitive user interface allowing users to discover nearby deals and restaurants to upload surplus food quickly.

Achievements & Certifications

Oracle Cloud Infrastructure (OCI) AI Foundations Associate Certification
Career Essentials in Generative AI by Microsoft and LinkedIn - 2024
